On the Elements side, Photoshop's best-selling feature is probably its powerful selection tool. With the release of Photoshop CC for the iPad, there was also a Mac version, which tied with Elements as the fastest of the two apps in the Office for iPad suite. But that's changing now.

Elements now has an easy Path Selection tool, which is faster and more accurate than Selection by Drag. With the new version, you can now create custom selections with selections that behave more like Live Paint writing. One of the most powerful tools in Photoshop is the Content-Aware Fill feature. This is a feature that tells Photoshop where a face is located in an image, and applies the corresponding color. Now that you can Layer Mask an image to hide parts of it, adorably called the “Blister” tool, the Content-Aware Fill feature has new capabilities to render a still image’s content. This is especially handy if you have positioned an image within another image. Now with the Supersonic Filter, you can shoot a picture and have it automatically add a high-quality vignette, rounded corners, and other effects, with just a few pulls of the iPhone’s volume buttons. Set your iPhone’s volume to one for video, three for portrait, and five for landscape. Do so in Photos, and when you next shoot a picture, you’ll have a new type of selfie. You can also use these settings to adjust vignetting in any RAW photo. For more info, like how to use the Supersonic feature, watch this. One of the many new features in Photoshop CC is the ability to shoot stunning HDR images from a range of digital cameras. You can shoot as many shots as you'd like on your iPhone, including five high-quality versions. There is no need to load the shots up separately used for individual edits. You can do all of this from the comfort of your home. After editing, the results can now be exported in a few different formats, so you can get them out to family and friends.

Photoshop Fix gets even better performance and deeper logical support for a broad range of RAW formats. Now, with updates to the Repair Brush, you can address common digital image defects, including scratches, dust, dried droplets and more, in a matter of seconds. Many of the new features just made available are already available as free updates in the Mac App Store, including the ability to quickly share photos for a quick decisional review, the Delete tool and the Fill tool, with the Discover and Document Presets feature in Photoshop Lightroom CC. The new features are available today as a free update. If you haven't already upgraded to the newest version of Photoshop or Photoshop CC, visit <https://www.adobe.com/creativecloud/desktop.html> to learn more about the benefits of using Adobe Creative Cloud. At Adobe MAX, attended by over 1,500 Creative Pros from 150+ countries, the company will showcase the power of creativity with its top-selling apps for both desktop and mobile devices. Available on Windows, macOS, Android and iOS, Adobe Photoshop CC is the top image editing app, and Adobe Lightroom CC is the top photo organizing app. Both include powerful features that were announced today including new speed, accuracy, and workflow enhancements for photos, resolution and print quality improvements for prints, and a suite of features for content creators, photographers, and videographers. Speaking of videographers, the new Adobe Premiere Pro video editing and motion graphics suite (for creation on a single Mac) will also be released this week and touted for its new workflow that eliminates importing and exporting between the desktop and mobile apps.

"Creative Cloud" also includes Photoshop Express, an app designed for creating images quickly. The software is convenient, with an emphasis on speed. It has the same features as Photoshop and is a good starter kit for hobbyists, but you'll have to buy the software outright. There's also a new real-time layer mask feature, which enables you to see what's in front and behind your layer, while viewing your image in its layers window, making application of the mask extremely intuitive. Expanding upon real-time clipping masks, new features in version 20.1 enable you to create masks in layers that live alongside the layer itself and are truly real-time, updating in the same way that the layer's contents do as you edit or

replace the mask. Photoshop also features an intuitive new layer boundary to intuitively show areas that are different based on the contrast between the layer and its background. This can be extremely useful, for instance, to show shadows of a logo projected onto a white background. Using the new layer editing options, you can now place and control instructions on top of the layer itself; creating a frames-like tutorial that helps walk new users through your design or editorial process. Finally, a new limited white color allows you to quickly set a white background for your layers and masks. This feature is extremely helpful for the design process when working on high-contrast images.

New in Version: Introducing Select and Mask in Layers is an update to the core features of Photoshop that integrates Select and Mask functionality directly into the Layers panel. By clicking on a selection border directly beneath a layer, you can quickly mask or un-mask that layer, or create or delete selections that cover the entire layer.
